

A background image showing two men in business attire. One man, with a beard and wearing a dark blazer, is looking down at a document. The other man, seen from the side, is also looking at the document. They appear to be in a professional setting, possibly a meeting or collaborative work environment.

INTEROS SUPPLY CHAIN RISK INTELLIGENCE + SAP Ariba SUPPLIER RISK

Proactive, Comprehensive Risk Management Across the Supplier Lifecycle

Combine the world's most extensive supplier risk knowledge base with the leading procurement and supplier management platform to make better sourcing, onboarding, purchasing and supplier management decisions.

Threats to your business can come in many forms from anywhere across your extended network of suppliers, third parties, and subcontractors. Third party risks vis-à-vis cyber security, financial weakness, violations of ESG policies, and regulatory non-compliance can result in service interruptions, reputational harm, revenue loss, and increased scrutiny from oversight agencies.

The combination of **Interos Supply Chain Risk Intelligence** and **SAP Ariba Supplier Risk** deliver instant visibility into continuously updated multi-factor supplier risk scores that enhance risk aware purchasing. The combined power of external risk data from Interos and internal operational data from SAP Ariba help procurement teams make better sourcing, onboarding, purchasing, and supplier management decisions across the supplier lifecycle, reducing the chance that risks become disruptions, and building a more resilient enterprise.

Interos + SAP Ariba

With the Interos i-Score™ incorporated into your SAP Ariba supplier profiles, your team has instant visibility into the most up to date external risk assessments across six primary risk factors (Financial, Restriction, Catastrophic, Geopolitical, ESG, and Cyber) for every supplier in your network.

Procurement teams are using this risk intelligence to assess potential suppliers before and during sourcing projects, conduct detailed due diligence during new supplier onboarding, and monitor existing suppliers for emerging risks for faster responses to potential disruptions. With broad coverage of risk types, and detailed attributes underlying the assessments, Interos' i-Score is equally valuable for any supplier managed in SAP Ariba, from strategic IT infrastructure vendors to suppliers of business services and everyday commodities.

Manage Supplier Risk Throughout the Supplier Lifecycle

Strategic Sourcing | Together, SAP Ariba and Interos drastically improve the speed and efficiency of supplier sourcing activities. With instant access to risk scores for the hundreds of millions of supplier entities in Interos, sourcing teams can quickly assess and evaluate potential suppliers for vulnerabilities and other challenges that can impact their ability to serve your organization.

Contract Management | With detailed assessments across six key risk factors and hundreds of attributes, Interos can pinpoint areas of focus for contract clauses and terms. Combine Interos' risk scores with the supplier performance data in SAP Ariba to support renegotiations during contract renewals.

Purchasing | Changes to supplier risk should be reflected in your purchasing decisions for better outcomes. Up-to-date risk data from Interos can be used to evaluate supplier risk when creating, reviewing or approving purchase requests.

For example, when a supplier's financial risk reaches a critical threshold, you can choose to buy from alternative suppliers until a deep assessment of the risky supplier and any necessary remediation activities are completed.

Supplier Risk Management | Proactively manage supplier risk at scale with Interos risk scores embedded within your supplier profiles. Visibility into continuously updated risk scores within SAP Ariba provides continuous monitoring across all of your suppliers, rather than relying on periodic review cycles on just a sub-set of suppliers. Integration into SAP Ariba Supplier Risk enables you to quickly identify and focus your efforts on the suppliers who currently pose the highest risk.

Reporting and Analytics | Quickly visualize and report on current risk postures across your entire supplier network, and combine transaction data, supplier performance, and supplier risk for a complete picture of the opportunities and risks facing your supply chain.

Learn more about Interos Supply Chain Risk Intelligence for SAP Ariba Supplier Risk by visiting the [SAP Store](#).

Interos is the supply chain risk intelligence company. Spanning the lifecycle of supply chain risk, Interos enables procurement leaders to assess, categorize, and monitor suppliers at speed and scale to protect organizations from regulatory fines, unethical labor, cyber-attacks, and other systemic vulnerabilities.

From enhanced risk assessments and due diligence during sourcing projects and supplier onboarding, to always-on continuous monitoring of risk changes and disruption events, to rich reporting on supplier and supply chain risks and emerging challenges, Interos + SAP/Ariba Supplier Risk deliver the insights and collaboration with suppliers to manage risks across your supply chain.
